Abstract (Basic): JP 7179636 A

Modification of inner wall of tube made of polymers contg. F in the side chains comprises irradiating laser or UV ray with photon energy of not less than 128 kcal to the area contacting with material contg., at least, an element chosen from Si, Ti, H, Li, Ga, Ba, Al, or B. The polymers contg. H in the side chains are opt. modified by irradiating laser or UV ray with photon energy of not less than 80 kcal, contacting with material contg., at least, an element chosen from B, P, S, Pt, Br, O, Cl, H, or F.

USE - Tubes or pipes modified inner surface.

ADVANTAGE - Irradiation of active ray modifies inner surface of tube, improving wettability or adhesion or other materials.
